

Project 1: create your Home Page, Deadline: 12 April 2014

For your first project, you are to create your own home page that can be placed on the Web. Your webpage should be submitted as zipped file to my E-mail. State your name and student number **clearly** in the e-mail. Include whatever files (e.g. HTML, CSS, images...) that are appropriate in your submission. The layout and content of your Web page are entirely up to you. You are encouraged to be creative and to produce a document that you can display to the world. **Your page must provide the** following:

Part 1 (30 points)

Your page should have at least two different parts, one containing some personal information (e.g., your name, where you're from, etc.), and another set of links. You should include both internal links (that jump to locations within the info page) and external links that would lead to other pages on the web (like something related to one of your hobbies, etc). Your info page must have your name prominently centered at the top. There should be several sections to the info page (e.g., Personal Info, Hobbies, Favorite Links), each with its own heading. At least one section must have multiple paragraphs in it.

Part 2 (30 points)

Your info page should perform some text formatting (bold, italics, color, BIG) but try not to overdue it to the point that the content is compromised. You should include a favorite quote, e.g., a poem or line from a Hadith or Quran. There should be at least one list (e.g., your top-ten favorite Hadith). There should be at least 5 links in the page, including a link to the University of Umm AL Qura and to the CS211 home page. At least one of those links must occur in a sentence. There should be at least 2 images in the page, one of which must be stored locally along with the Web page. There must be at least one table, some of whose rows are more than one line long.

Part 3 (40 points): creativity

Your home page should be professional. Choose proper colors and backgrounds. Font usage , its color, and size must be harmonious and stylish. Elements must be located symmetrically and must be properly organized. The home page must link to other pages instead of throwing all the information in one page. Spacing between elements must be controlled appropriately, no too much spacing is required.

Important note: Your page should use standard HTML features **only**, so that it will be viewable using Internet Explorer, Netscape (Firefox), Opera, Safari, Chrome, etc. While it may not look exactly the same due to inconsistencies and variations in the browser implementations, your page should look reasonable under any such browser.

- **Be ready answer question on how you created the webpage, and about its contents. So, do not try to copy paste from Internet.**
- **You have to do the site by “yourself” otherwise, you get “Zero”.**
- **The site should not include any Java Script or PHP code and it only include HTML and CSS code.**
- **If you do less than required your mark will be decreased. Similarly, you are not encouraged to do more than required.**
